III Semester Diploma Examination, April/May-2018

DATABASE MANAGEMENT SYSTEM

Tin	ne : 3 Hours	[Max. Marks : 100	(2)
Note	e: (i) Answer any six full questions from Part – A. Each carrie (ii) Answer any seven full questions from Part – B. Each ca		t.
	PART – A	BETA CONSOLE	
1.	What do you mean by end users? List the different types of end users?	Diploma - [A 5]	3ranche
2.	List the various DBMS interfaces and explain each.	5	ر من
3.	List out the notations used for E-R diagram.	Diploma Question Pa 19] Beta Console Education	apers [201
4.	List and explain the different types of attributes.	5	,
5.	Classify and explain the constraints on databases and give examp	les for each of them. 5	*!
6.	Define the following terms:	5	7;
	(a) Domain		
٠.	(b) Attribute	· .	2. 4 2
	(c) Tuple		
	(d) Relation (r)		
	(e) Relation schema (R)		
			51
7.	Write a note on CREATE and DROP command with example.	5	
8.	Explain second normal form with an example.	5	
9.	Bring out the advantages and disadvantages of NoSql.	5	
	1 of 2	Turn over	

15C	S33T 2 c	of 2	1222
	PAR	rT – B	
10.	Discuss any five advantages of DBMS.		10
10.	Discuss any five advantages of DDMs.		
11.	With a neat diagram explain the different	t phases of database design.	10
12.	What is a constraint? Explain with exan	- 1	at are violated 10
	during INSERT, UPDATE and DELETE	e operations.	_ 10
13.	Explain the following with example:		10
	(a) INSERT		
-	(b) DELETE		BETA CONSOLEI
	(c) UPDATE		
	(d) Group by		Diploma - [All Branches
	(e) Order by		3
14.	(a) Retrieve the total number of e	employees in the research d	enartment by
4 T,	considering EMPLOYEE an DEPA		Diploma Question Papers [2015
	· · · · · · · · · · · · · · · · · · ·		19]
	(b) Create a view that has employee employee table.		Salary on the 5
15.	employee table.	number, employee name and	_
15.	employee table.	number, employee name and	5
15.	employee table.(a) Explain different types of aggregat(b) What is Data independence and explain types	number, employee name and e function. plain its types.	5 5 5
15. 16.	employee table. (a) Explain different types of aggregate	number, employee name and e function. plain its types.	5 5 5
16.	employee table. (a) Explain different types of aggregate (b) What is Data independence and explain the different types of aggregate (b) What is normalization? Explain the different types of aggregate (c) and a	number, employee name and e function. plain its types. erent UPDATE anomalies of ta	5 5 5 bles. 10
16.	employee table.(a) Explain different types of aggregat(b) What is Data independence and explain types	number, employee name and e function. plain its types. erent UPDATE anomalies of ta	5 5 5
16.	employee table. (a) Explain different types of aggregate (b) What is Data independence and explain the different types of aggregate (b) What is normalization? Explain the different types of aggregate (c) and a	number, employee name and e function. plain its types. erent UPDATE anomalies of tair relational schema.	5 5 5 bles. 10
16. 17.	employee table. (a) Explain different types of aggregate (b) What is Data independence and explain the different types of aggregate (b) What is normalization? Explain the different types of aggregate (b) What is normalization? Explain the different types of aggregate (b) What is normalization? Explain the desired types of aggregate (c) What is normalization? Explain the desired types of aggregate (c) What is normalization? Explain the desired types of aggregate (c) What is normalization? Explain the desired types of aggregate (c) What is normalization? Explain the different types of aggregate (c) What is normalization? Explain the different types of aggregate (c) What is normalization? Explain the different types of aggregate (c) What is normalization? Explain the different types (c) What is normalization? Explain the different types (c) What is normalization? Explain the different types (c) What is normalization? Explain the desired types (c) What is normalization? Explain the desired types (c) What is normalization?	number, employee name and e function. plain its types. erent UPDATE anomalies of tair relational schema.	5 5 5 bles. 10
16. 17. 18.	employee table. (a) Explain different types of aggregate (b) What is Data independence and explain the different types of aggregate (b) What is normalization? Explain the different types of aggregate (b) What is normalization? Explain the different types of aggregate (b) What is normalization? Explain the desired types of aggregate (c) What is normalization? Explain the desired types of aggregate (c) What is normalization? Explain the desired types of aggregate (c) What is normalization? Explain the desired types of aggregate (c) What is normalization? Explain the different types of aggregate (c) What is normalization? Explain the different types of aggregate (c) What is normalization? Explain the different types of aggregate (c) What is normalization? Explain the different types (c) What is normalization? Explain the different types (c) What is a transaction? Explain the desired types (c) What is a transaction? Explain the desired types (c) What is a transaction? Explain the desired types (c) What is a transaction?	number, employee name and e function. plain its types. erent UPDATE anomalies of tair relational schema.	5 5 5 bles. 10 10
16. 17. 18.	employee table. (a) Explain different types of aggregate (b) What is Data independence and explain the different types of aggregate (b) What is normalization? Explain the different types of aggregate (b) What is normalization? Explain the different types of aggregate (b) What is normalization? Explain the desired types of aggregate (c) What is normalization? Explain the desired types of aggregate (c) What is normalization? Explain the desired types of aggregate (c) What is normalization? Explain the desired types of aggregate (c) What is normalization? Explain the different types of aggregate (c) What is normalization? Explain the different types of aggregate (c) What is normalization? Explain the different types of aggregate (c) What is normalization? Explain the different types (c) What is normalization? Explain the different types (c) What is normalization? Explain the different types (c) What is normalization? Explain the desired types (c) What is normalization? Explain the desired types (c) What is normalization?	number, employee name and e function. plain its types. erent UPDATE anomalies of tair relational schema.	5 5 5 bles. 10 10
16. 17. 18.	employee table. (a) Explain different types of aggregate (b) What is Data independence and explain the different types of aggregate (b) What is normalization? Explain the different types of aggregate (b) What is normalization? Explain the different types of aggregate (b) What is normalization? Explain the desired types of aggregate (c) What is normalization? Explain the desired types of aggregate (c) What is normalization? Explain the desired types of aggregate (c) What is normalization? Explain the desired types of aggregate (c) What is normalization? Explain the different types of aggregate (c) What is normalization? Explain the different types of aggregate (c) What is normalization? Explain the different types of aggregate (c) What is normalization? Explain the different types (c) What is normalization? Explain the different types (c) What is normalization? Explain the different types (c) What is normalization? Explain the desired types (c) What is normalization? Explain the desired types (c) What is normalization?	number, employee name and e function. plain its types. erent UPDATE anomalies of tair relational schema.	5 5 5 bles. 10 10
16. 17. 18.	employee table. (a) Explain different types of aggregate (b) What is Data independence and explain the different types of aggregate (b) What is normalization? Explain the different types of aggregate (b) What is normalization? Explain the different types of aggregate (b) What is normalization? Explain the desired types of aggregate (c) What is normalization? Explain the desired types of aggregate (c) What is normalization? Explain the desired types of aggregate (c) What is normalization? Explain the desired types of aggregate (c) What is normalization? Explain the different types of aggregate (c) What is normalization? Explain the different types of aggregate (c) What is normalization? Explain the different types of aggregate (c) What is normalization? Explain the different types (c) What is normalization? Explain the different types (c) What is normalization? Explain the different types (c) What is normalization? Explain the desired types (c) What is normalization? Explain the desired types (c) What is normalization?	number, employee name and e function. plain its types. erent UPDATE anomalies of tair relational schema.	5 5 5 bles. 10 10
16. 17. 18.	employee table. (a) Explain different types of aggregate (b) What is Data independence and explain the different types of aggregate (b) What is normalization? Explain the different types of aggregate (b) What is normalization? Explain the different types of aggregate (b) What is normalization? Explain the desired types of aggregate (c) What is normalization? Explain the desired types of aggregate (c) What is normalization? Explain the desired types of aggregate (c) What is normalization? Explain the desired types of aggregate (c) What is normalization? Explain the different types of aggregate (c) What is normalization? Explain the different types of aggregate (c) What is normalization? Explain the different types of aggregate (c) What is normalization? Explain the different types (c) What is normalization? Explain the different types (c) What is normalization? Explain the different types (c) What is normalization? Explain the desired types (c) What is normalization? Explain the desired types (c) What is normalization?	number, employee name and e function. plain its types. erent UPDATE anomalies of tair relational schema.	5 5 5 bles. 10 10
